(54) Title: METHOD AND SYSTEM FOR ACCESS AND ACCOUNTING OF POINT-TO-MULTIPOINT SERVICES

(57) Abstract: The present application relates to a method for managing point-to-multipoint services in a mobile communication network, comprising: receiving from a mobile station a request for accessing a point-to-multipoint service, storing a subscriber identification in association with a point-to-multipoint service identification, performing an access enabling procedure, and providing accounting information to an accounting entity of the mobile communication network, where said accounting information identifies the subscriber who placed the request together with the point-to-multipoint service for which access was requested.
